Project Proposal

May 12, 2020

Mr. Craig McDonald
Water Department Manager
City of Loves Park, IL
100 Heart Boulevard
Loves Park, IL 61111

Subject: 2019 PLC and Radio Upgrade

Concentric Project Number: 181132.50

Dear Mr. McDonald:

Loves Park has an existing aging serial radio system and multiple PLCs (Programmable Logic Controllers) from different manufacturers that are active mature and approaching end-of-life support. Active mature is a manufacturer-identified stage of hardware, which is currently available; however, due to its age, will soon be unsupported and no longer manufactured in the near future. If there becomes a need for replacement, not only will the support no longer be available but the pricing to replace the hardware can be substantially more expensive compared to updated newer technology. Furthermore, once the PLC reaches end-of-life, replacement hardware can typically only be found through unauthorized resellers or places like EBay that do not carry support or warranty.

Concentric Integration (Concentric) recommends the replacement of the existing serial radio system with a new secure cellular system that provides greater bandwidth. The cellular network will be secure as the cellular radios will be on a private Verizon network segment. This means that the City's SCADA communications over the cellular will be segregated from the public internet and therefore much less exposed to the potential of malicious attack. The increased bandwidth provided by the cellular radios will provide Loves Park with flexibility moving into the future to adopt technologies and operations changes that require greater bandwidth (for example, short-burst live streaming of video or reduced SCADA poll times). Additionally, Concentric anticipates that the City will have reduced ongoing maintenance costs associated with the antennas of the current radio infrastructure. Cellular antennas have a much smaller footprint and require very little maintenance to keep them functioning well.

In addition to the radio replacement, Concentric will replace, migrate, and (where necessary) reprogram the City's active mature PLCs throughout the network. The new PLCs will be sourced from a single manufacturer (Allen-Bradley), which should make ongoing support of the SCADA network less complex. Consistency of PLC manufacturer across all locations will ease the process of support work should the need arise, resulting in reduced support time and costs for the City.

Concentric Assumptions / Customer Responsibilities

1. Customer will procure and have a business-class, reliable Internet or network connection at the main site prior to startup and installation of the cellular Private Network. Evaluation of alternatives, installation, and monthly recurring costs for the Internet connection will be the responsibility of the Customer. Concentric requests a chance to review the Internet contract prior to signing.
2. Customer will provide site access for installation, programming, and startup during Customer's normal business hours. Work outside of Customer's normal business hours can be agreed upon as needed, provided Concentric can secure the site(s) upon departure.

4. Customer will dispose of/recycle any removed equipment.

Annual Support

This project will add additional hardware and software to the Customer, some of which has support or maintenance associated with it. Concentric recommends the Customer maintain any applicable support agreements once the initial support/warranty periods expire. On this project, we have included the following support agreements, that all begin approximately at the date the product is shipped (not necessarily the date it is onsite) and last for periods varying from one year to three years.
